Problem Statement of the Capstone Project

Development of Service booking website to book services like cleaning, painting, plumbing, electricity using React, Material UI, Redux, Thunk in Front end and MongoDB, Node and Express as backend.

Objective of the Capstone Project

- User should able to choose the category of service
- Schedule and book the service within the chosen category
- Send OTP to consumer and verify the service quality with otp verification

ASCENDION

Libraries used in the Frontend :

- Formik and Yup
- JWT Decode
- Material UI and MUI icons
- React Router DOM

ASCENDION

Libraries used in the Backend :

- JWT Web token
- Crypto
- Express Validators
- Escape Function for Sanitization
- Twilio
- Multer

List of tools used for Capstone

- VS Code
- Postman
- MongoDB Compass
- Google Captcha
- Github

REGISTER SERVICE

Provider Page - Orders

- Order management page in provider's console, where provider can upload images after completing the services and it will be verified using customer by OTP.
- Customer will receive OTP like shown in the below image, and they need to give that OTP to the provider.

Conclusion

- Created a role based login for admin, provider, customer.
- Implemented user authentication and authorization mechanisms to ensure secure access for different roles.
- Did the functional website as per the requirements mentioned in the objective.
- Learned about how to create a website with a backend integration.
- Gained experience in managing database connections for seamless data handling.

Thank You
